MARUSYAK GABRIELLA
Junior Fullstack Developer

ABOUT ME

I'm Junior Fullstack developer, with great enthusiasm, love creating attractive and functional web applications, observing how each line of my code influences their functionality and appearance. I have a good knowledge of HTML5, CSS3, JavaScript, React, Redux, Node.js, TypeScript and utilize them to develop applications with responsive design. I am eager to work with experienced and talented developers, as I believe it not only an opportunity to gain new knowledge and skills, but also allows me to contribute to projects that can make a difference in the world.

Critical thinking

Quick learning

LANGUAGES

English -Intermediate

Ukrainian - Native

PROJECT EXPERIENCE

Cinemania, GitHub   [HTML, CSS3, JS, REST API, Vite]
Application for choosing a movie that allows to select new releases and trending films for future viewing, and save them to your library.
I created a modal window that allows the user to view all the details of the selected movie and add it to their library. Role: Developer, team project.

Goose track, GitHub   [HTML, CSS3, JS, React, Redux, Node.js, Vite]
This application is designed for effective planning and organization of one's work or personal day, allowing users to create tasks, determine their complexity, and track their completion. I was responsible for developing the statistics page and I implemented the backend part for the user authentication system. Role: Developer, team project.

MIMINO, GitHub   [HTML, CSS3, JS, Vite]
The website for a restaurant-hotel that allows visitors to explore the restaurant menu and hotel rooms, as well as conveniently make online reservations.
I created sections of the website about the restaurant and hotel, including the use of sliders for effective content presentation. Role: Developer, team project.

Car rental , GitHub   [HTML, CSS3, JS, React, Redux, Node.js, Vite]
A web application for car rental, offering a convenient and simple way to rent cars online with additional services Role: Developer, individual project.

Phonebook, GitHub   [React, Redux, CSS3, JS, Webpack]
A simple application that allows you to create your own contact book and filter them by name for quick search. Role: Developer, individual project.

WORK EXPERIENCE

Electrical and telecommunications mechanic
Branch 'Management 'Ukrhaztekhzvyazok' of Joint Stock Company 'Ukrtransgaz'| Nov 2013 - Dec 2020

My main responsibility was to ensure uninterrupted technological digital communication between compressor station dispatchers, identifying and resolving data transmission issues. Together with other engineers, we built an online map of communication lines using specialized programs. This allowed us to quickly detect and locate communication line disruptions, enhancing the system's reliability and efficiency.

Mathematics teacher
Secondary School | Sep 2010 - Nov 2013

Taught mathematics to students in grades 5-9 and successfully prepared them for mathematics olympiads and competitions, resulting in excellent outcomes and winning positions.

EDUCATION

IT School GoIT
Fullstack Developer | Nov 2022 - 2023

Uzhhorod National University
Master Degree Physicist, engineer | Sep 2005– Jun 2010
